Dear Cathy

Formal Complaint

My reference to badgers made in my recent objection should read Section 10.28 of the Professional Report. I am particularly concerned at the reference to 'exclusion' and 'setts being closed' this 'under terms of a license issued by NIEA'. This is, as I read it, is included in the Confidential Badger Report access to which has been denied to me.

As a concerned member of the public, I request an explanation of what is going on. This is a serious situation affecting a protected species which I intend to explore fully with NIEA

I am also concerned that the 21 turbines that have been built have been granted permission **under appeal**, as has the permission for a further 8 turbines. 'Of the 32 permitted, only 3 were granted outside the appeal process and only after a precedent has been set for turbines at that location. The extra 11 still to be built at Dunbeg will intensify the visual impact of the development.

Now the current application is leaning on the precedent created at Dunbeg to justify a further extension of development by 8 turbines making a total of 40 turbines in what is acknowledged as a 'sensitive area'. This is overdevelopment, a little by little approach which could well see further applications for extension which, with the precedent set, will be very difficult to refuse.

Please log this as a further objection to this application.

Yours sincerely

Olga Harper

Dear Ms Harper,

I am currently considering your further objection for inclusion in my presentation for Wednesday's planning committee. You have written that, *"That is unacceptable under current legislation. I am particularly worried by the wording of 16.29 which refers to '....badgers have been excluded and the setts have been closed.' I shall be dealing with this issue in more detail in my next letter of objection to this ecologically damaging proposal."*

I have been unable to find that paragraph using the number provided. Would you please advise me which document you are referring to?

Many thanks for your help.
